

ULTIMATE AIR PURIFICATION FOR COMMUNAL SPACES

Our Air Purifiers combine multiple air treatment technologies to effectively clean and sterilize indoor air. Remote Control features ensures safe and easy operation. UV-C lamps will powerfully destroy all microorganisms as they pass through or become trapped in the filter. UV-Photo catalytic technology kills microorganisms by damaging their DNA and making them unable to mutate and replicate.

(All Air Purifiers conform to Test Standard EN55014/EN61000)

Premium Hygiene Solutions for Public and Private Spaces
